This handbook is a summary of various aspects of Tlingit grammar and grammatical analysis in tabular and graphical form. It is abstracted from work by Naish and Story (1966, 1972, 1973, etc.), Leer (1978, 1991, etc.), Cable (2008, 2010, etc.), and from my own research. The tables and figures are identical with those in my *Basics of Tlingit Verbal Structure* manuscript, with the exact same files used to produce both.

The tables here aim to be comprehensive for all Tlingit dialects except where they are explicitly noted to be specific for a single dialect. Where space is limited, dialect-specific forms are indicated with a subscript uppercase letter: x_T Tongass Tlingit, x_S Southern Tlingit (but x_S Sanya Tlingit versus x_H Henya Tlingit when the two are distinct), x_N Northern Tlingit, x_R Transitional Tlingit (Wrangell, Kake, etc.), x_G Gulf Coast Tlingit (Yakutat, Dry Bay, etc.), x_I Inland Tlingit. Lack of dialect specification indicates that an element is either identical in all dialects (except for certain details like variable vowel length) or that the element has only been documented in Northern Tlingit. Tongass Tlingit forms are often presented in opposition to forms which are identical in all the other dialects, in which case the latter forms are left unmarked. In many cases only Northern forms are presented, this is done purely for concision.

The Tongass dialect has only been published in an orthographic form once (Williams, Williams & Leer 1978). That system depends on distinguishing the vowels VV' and VV'' from ordinary VV , a difficult reading requirement. The revised orthography used here is based on the Revised Popular orthography with adaptations from Michael Krauss's Eyak orthography which has a similar vowel system. Thus VVh is used for prior VV' and VV'' for prior VV . Leer's use of V' in transcription has been converted to VVh as well. Since h cannot occur at the end of a syllable in Tlingit this system is unambiguous. Note however that the old Naish-Story system used h for single-letter vowels at the end of words, though this did not indicate a different length or quality.

Southern Tlingit has never been written extensively in an orthography that preserves its tone distinctions. The system used here is adapted from the Revised Popular orthography. It represents falling tone as an acute accent on the first letter and a grave accent on the second letter of long vowels, i.e. $\acute{V}\grave{V}$, which is conceptually a sequence of high and low tones.

This document has been designed to be printed and bound as a pocketbook so it can be easily carried everywhere. The ideal format is two logical pages per printed page ("2 up"), double sided, folded in half widthwise and stapled along the fold. To keep the printed form small, there is no discussion other than what is presented in the tables. For detailed descriptions of the tables here see my *Basics of Tlingit Verbal Structure* manuscript.

This is a living document. Contributions are welcome and encouraged.
